Innovative Service, Fuelled by Passion!

NetPOS Flexibility:

- Homebased
- Fuel
- Retail
- Fuel / Retail
- PC / Touchscreen
- Wide integration solutions

The NetPOS system integrates seamlessly to the Back Office NetACC software using a shared database for real time data.

NetPOS & NetACC integrates to the Global NetHOS (Head Office) system which is web based to manage a network of sites and data for standardization, exceptions and reporting with real time site data.

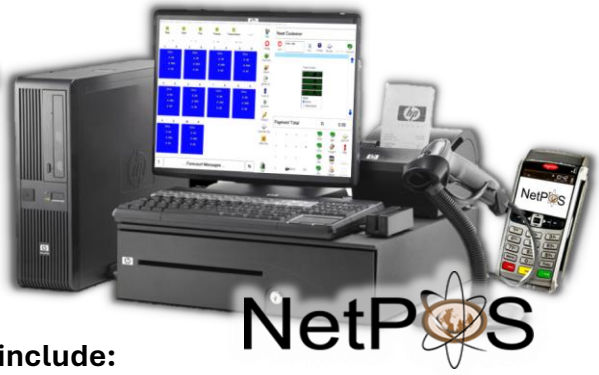

NetPOS has been widely accepted as the most versatile integrated POS software integrating to various pump types, forecourt controllers, ATG, OTI and Fleet solutions, including MiniPOS Figment, Payment24, EFT terminals and payment solutions.

NetPOS: Your Forecourt & Point of Sale Powerhouse

NetPOS serves as your central control hub, seamlessly integrating forecourt pump management with your in-store Point of Sale (POS) operations. Its user-friendly window design allows for efficient management without constant screen changes, whether you're handling wet stock or dry stock sales.

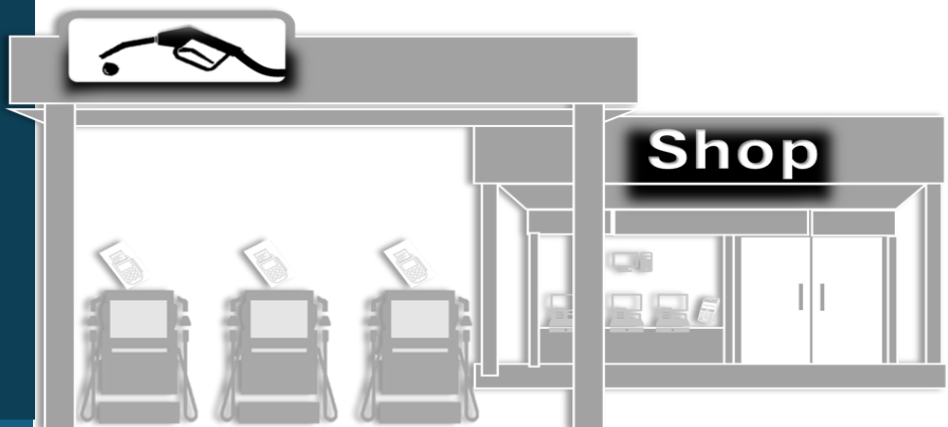

Select from touchscreen options to cost effective solutions.

Key functionalities include:

- **Intuitive Pump Control**: Easily START, STOP, and PAY pumps directly from the main screen, with real-time status updates. Various attendant tagging systems.
- **Versatile Payment Options**: NetPOS supports a wide array of payment methods, including the **FleetMove Post-Pay transactions**, **voucher payments (such as B2C Vodacom vouchers)**, and **online hot card functionality for Fleet control**. Management of oils issued to attendants, repay, suspend, recall options and adding slip info are added features. Figment & SBSA integration / P24...
- **Flexible Split Payments**: Facilitate customer convenience by allowing payments to be split across different methods (Card, Cash, and Vouchers) directly on the Outdoor Payment Terminal (OPT).
- **Robust Transaction Management**: All sales, whether dry stock or wet stock, are paid off on the POS, ensuring centralized record-keeping.

NetACC: Your Back-Office Administration Suite

NetACC is the administrative backbone of your operation, handling all essential back-office tasks, whether integrated with NetPOS or running as a standalone product. It offers powerful tools to manage your finances and stock.

NetACC: (BOS)

Manage receiving of stock, stock control, create Local Account customers, manage deposits, transactions, create and apply discounts as required.

Built in recipe module for On-Demand and Prepared items, manages ingredients, building recipes and Unit of measures. Automatic calculations on cost and GP%.

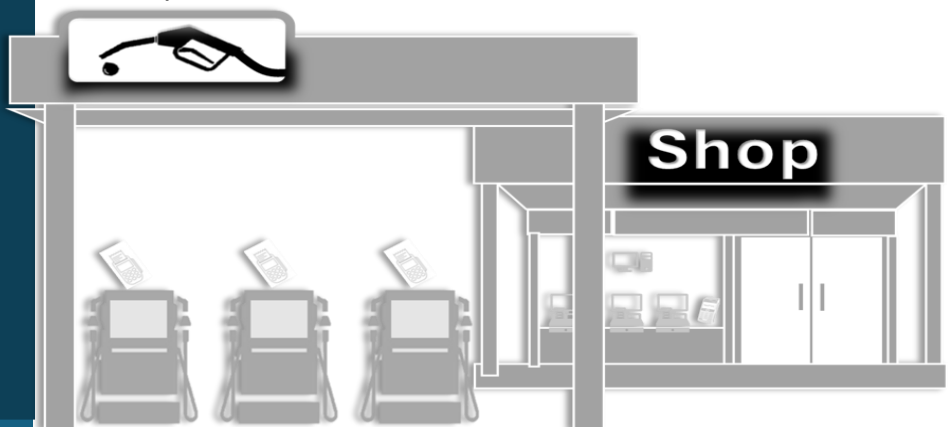

Create and apply combo and promotions set date and time.

Cashup and balance cashiers, manage various method of payment reconciliations.

Manage stock, price changes, print labels, send item data to scales. Financial control management and extensive reporting.

Highlights of NetACC capabilities

- **Comprehensive Debtors and Creditors Management**: Maintain detailed records for both debtors and creditors, including managing sub-accounts for large fleet customers. Customize discounts. Presents built in emailing of debtor statements. Issue fuelling tags or swipe cards.
- **Streamlined Dry Stock Operations**: From adding new items and managing departments and locations to tracking stock levels, creating specials, recipes, **NetACC provides full control over your dry stock inventory**. Provides warehouse storage capabilities, separating shop and stored items for better stock management control.
- **Efficient Reporting**: Generate a wide variety of reports, including sales, stock lists, and detailed financial summaries, to gain deep insights into your business performance.

Global Head Office System (HOS):

NetPOS and NetACC can be locked to ensure HOS management of all items, promotions, combos, recipes and price book management including categories, departments are standardized across all stores.

With the HOS, multiple sites can be updated from one centralized location simultaneously for new items, pricing, promotions and other site requirements.

For stores with Fuel sites, fuel price changes with set date and time can be managed from the HOS.

Data synchronization download and upstream in real time. Centralized report management of all sites for sales, dry stock, fuel, GRN's and live monitoring.

Access to the HOS is web based and can be accessed from anywhere you are in the world. We call it, a working holiday.

NetPOS Global Head Office System (HOS): Centralized Command

For businesses with multiple sites or operating across different regions, the **NetPOS Global HOS** offers a powerful web-based solution for **centralized data management and control**.

HOS enables:

- **Centralized Management**: Control stock items, price books, new items, redundant items, categories, departments, pricing, pricing exceptions, ingredients, recipes, promotions, combos, and account customers from a single location.
- **Regional Allocation & Distribution**: Allocate and send data updates, including **stock items, recipes, promotions, combos, and fuel price changes**, to specific regions or groups of sites through batch management within minutes of sending to stores.
- **Real-time Monitoring**: Monitor site connectivity and transaction uploads to ensure all locations are up-to-date and operating smoothly.
- **Reporting: Data upstream in real time.** Manage all site data from a centralized HOS system, review and download sales reports for fuel / dry stock / goods received reports, all transactional data. Drill down reports for site specific data.

Advanced Features for Enhanced Operations

Our integrated solutions offer specialized functionalities that set your business apart, ensuring efficiency, security, and adaptability.

Smart Fuel Management

- **DOMS integration:** NetPOS is fully integrated to the versatile DOMS making NetPOS a fit for all pump types including MPI and various attendant tagging solutions.
- **Automated Fuel Price Changes**: **Set new fuel prices remotely through the HOS** with specific dates and times for activation at site level, ensuring compliance and timely updates.
- **Online Hot Card Authorization**: FuelMaster sites benefit from a key change: authorization checks now occur **online against a centralized hot card file at the switch level**, rather than relying on on-site files.
- **OTI VIS Integration**: Implement automated and secure vehicle refuelling using OTI PetroSmart Vehicle Identification Devices (VID's). The **VIS Site Controller** manages business rules for tag reading and interacts with the Forecourt Controller for pump and POS functions.

Comprehensive Stock & Sales Control

- **Dynamic Dry Stock Management**: Beyond basic tracking, NetACC allows for detailed management of dry stock, **set up multiple discounts**, either as a fixed rand value or a percentage, applicable to **Diesel and dry stock items** Discounts are linked to specific Local Account customers or applied via secured authorization for day to day customers.
- **Innovative Recipe Module**: Manage both **"Prepared" (pre-made)** and **"On-Demand" (customer-choice)** recipes, with precise ingredient tracking and automated stock adjustments upon sale or preparation.
- **Seamless Scale Integration**: Handle weighted and non-weighted items, including complex recipes, with **barcode support and efficient data export** for accurate pricing and inventory.
- **Combos & Promotions**: Easily create and manage **"combos" (selling two or more items at a set discounted retail)** and **"promotions" (applying discounts based on multiple item purchases)**, all configurable via BOS/HOS.
- **Issue Oil Function**: Cashiers can **issue oils to attendants.** The oils issued are tracked via Figment, appears on the OPT for the attendant to add to the fuel transaction and or processed by the cashier for cash/Local Account sales for improved oil issue stock management. (Attendant tagging)

Advanced Features for Enhanced Operations.

Streamlined Account & Payment Solutions

Advanced Local Account Management: Create individual Local Accounts, add **unlimited sub-accounts for vehicle fleets**, and apply specific card rules (e.g., fuel type allowed, required odometer). You can also **add deposits to local accounts**.

Integrated Payment Terminals (IPT/OPT): Ensure secure and efficient card payments. **IPTs handle POS-driven retail transactions**, while **OPTs process fuel transactions initiated by attendant tag numbers**, streamlining the payment process at the pump.

Effortless Statement Management: **Email Local Account statements directly from NetACC** after completing the month-end procedure. A history is always maintained of previous statements.

Robust Error Handling: A comprehensive list of **"OPT Response Codes (FleetMove and Vouchers)"** with error messages and descriptions is provided for quick reference, enabling attendants to understand and resolve transaction failures efficiently.

Powerful Reporting & Insights

Comprehensive Reporting Suite: Access standard reports from HOS including **Sales Summary, Pump and Detail Reports, Stock Movement, Stock Received Summary**, and **Site Reports**.

In-depth Financial Analysis: NetACC provides reports like **Debtors Age Analysis, Blacklisted Debtors, Creditor Age Analysis, Payments Made, and Payments Received**.

Deviation Reports: Gain critical oversight with detailed **Deviation Reports that trace activities across all NetACC menus**, including stock changes, fuel receipts, and account modifications, ensuring full accountability.

Seamless Integration. Unmatched Control. Global Reach.

At Stowe Holdings, we understand the complexities of managing modern fuel and retail operations. That's why we've developed a comprehensive suite of integrated solutions – **NetPOS**, **NetACC**, and the **NetPOS Global Head Office System (HOS)** – designed to streamline your business, enhance control, and drive profitability.
